

KCM INFLATABLES HOT TUB HIRE

HOW TO MAINTAIN YOUR WATER

Thank you for booking your hot tub hire with us! Our delivery team would have set up your luxury hot tub hire ready for you to use for the weekend & relax! On this A4 sheet of paper we have listed some particularly important but simple instructions to keep your water looking crystal clear for the whole weekend we follow these instructions ourselves for our own personal hot tub and our water can last upto 8weeks if followed correctly.

CHLORINE SHOCK - All our hot tubs are ready to use within 24 hours from set up & they must all get a high dosage chlorine shock on the day of delivery. Our delivery team will set the hot tub up and start the water running. Once the water is full the water will need the chlorine shock Granules added to the tub. (we recommend doing this before you go to bed within 24hrs you plan to use the hot tub the following day).

INSTRUCTIONS TO USE CHLORINE SHOCK GRANULES – Dissolve the full quantity of (CS) into a warm/hot pan of water, once dissolved pour the water into the tub near the filtration inlets, cover the hot tub with lid & leave for 24hrs.

(TUB CODE CG)

CLEANLINESS & CARE BEFORE USE - Before use always have a shower with your swimsuit on in warm water by following this instruction will help eliminate skin oils and detergents transferring into the hot tub.

(AVOID USING ANY SOAPS/DETERGENTS)

Try to avoid transferring foreign objects into the hot tub whilst getting in & out before & after each use.

Avoid getting human hair into the hot tub.

Do not urinate in the hot tub!

FILTER CHANGE - Change the filter after each use. To avoid any unnecessary error codes & Blockages, We highly advise you change the filter to your hot tub after each use, if this is not changed the filter will gather legionnaires, Bacteria & all other bits that have entered the hot tub and end up creating

a blockage within the heater/filtration system & increasing chances of the customer getting (HOT TUB RASH) folliculitis.

(OUR DELIVERY TEAM WILL GO OVER HOW TO CHANGE YOUR FILTER ON DELIVERY/SET UP)

(Chlorine Tablets CODE CT) & test strips – In your box that you have been left you will find a tub of chlorine tablets (CT) & test strips to maintain your chlorine levels over the duration of your hire. We recommend you test the water 24hrs after the chlorine shock dosage and every morning after to maintain the required levels to safely use your hot tub. From the shock dosage you should only need to increase the chlorine level (PPM) from the 2nd day of use. Over time these levels will drop we recommend testing the water in the morning and then add the (Required amount) of chlorine tablets into the float dispenser provided. The chlorine tablets will raise the PPM By 1.2ppm within 4hrs of using. By testing in the morning this will give you plenty of time to get your levels to where they should be.

REQUIRED LEVELS

PPM – 3-5 PPM PH – 7.2 -7.8 PPM ALKALINITY – 80 – 120

CLOUDY WATER! The recommended time to use and enjoy your hot tub hire is 20-30 minutes each time & Would advise the customer to take a break for their own wellbeing & to always stay Hydrated and to let the filtration system do its job by keeping your water at its cleanest! If your water is starting to look cloudy/mirky we have provided a NON-CHLORINE SHOCK (**NCS**) to help bring back your water crystal clear by killing off bacteria, (please note this will not work if the water has not been looked after by following these instructions, we advise doing this at the earliest stage when you notice the water is starting to look cloudy).

Cloudy waters are mainly caused by high usage and contaminated water from skin/hair oils/Foreign Objects.

CHILDREN – Due to the temperatures in hot tubs, small children and babies should not use a hot tub. They could overheat or get dehydrated much faster than an adult would and will not be able to tell what is wrong in time

to tell you. It is better safe than sorry with a small child under the age of **5 YEARS OLD.**
